

**Prof. Czesław Olech**

**Professor at the Institute of Mathematics of the Polish Academy of Science**

#### **Most important awards, prizes and academies**

*Awards:* State Prize of Poland; Bernard Bolzano Golden Medal of the Czechoslovak Academy of Sciences; Martin Drinov Golden Medal of the Bulgarian Academy of Sciences; Stefan Banach Medal and Nikolaj Kopernik Medal, both of the Polish Academy of Sciences. *Academies:* Full member, Polish Academy of Sciences; Pontifical Academy of Sciences; Foreign member, Russian Academy of Sciences; Polish Academy of Arts and Sciences. *Honorary doctorate:* University of Vilnius.

#### **Summary of scientific research**

Main fields of research interest: ordinary differential equations and mathematical theory of optimal control. *Contributions to O.D.E.:* various applications of Wazewski topological method in studying asymptotic behaviour of solutions; exact estimates of exponential growth of solution of linear second order differential equations with bounded coefficients; theorems concerning global asymptotic stability of the autonomous system on the plane with stable Jacobian matrix at each point of the plane, results establishing relation between question of global asymptotic stability of an autonomous system and that of global one-to-oneness of a differentiable map; contribution to

the question whether unicity condition implies convergence of successive approximation to solutions of ordinary differential equations. *Contribution to control theory*: establishing a most general version of the so-called bang-bang principle for linear control problem by detailed study of the integral of set valued map; existence theorems for optimal control problem with unbounded controls and multidimensional cost functions; existence of solution of differential inclusions with nonconvex right-hand side; characterization of controllability of convex processes.
